"Marathon for the Cure"

The race to raise 42K by DCLC

{Submit funds by March 15th}

Spastic paralysis is a category of diseases that affect the central nervous system, leading to the loss of most or all control over muscles of the human body. This can make something as easy such as brushing one's teeth extremely difficult. Help the Spastic Paralysis Research Foundation by contributing to our 42K yearly goal for this year. Plan a fundraiser with your club and save lives!

Supported by

The SPRF Committee
